

CE CERTIFIED ABSEIL DESCENDERS

When conducting insertion and rescue operations, Special Forces, Police Tactical Units and Emergency Services may be required to abseil to a point of entry into buildings and high structures or inaccessible ground locations. The Airborne Systems Abseil Descender and Harness provide a safe, secure and controlled method of descent from fixed structures or helicopters.

The Abseil Descender is a hand operated mechanical device for controlling the rate of descent whilst abseiling. Key features are:

- All Descenders are fully CE certified
- Available with fixed or opening (lockable) gates
- Available with single or double stop actions
- When locked, the descender frees both hands
- If released, the descender automatically locks
- One or two person capacity. Can be used for rescue or evacuation
- Suitable for use with 11 mm diameter polyester abseil rope
- Can be used from fixed structures or helicopters
- High Safe Working Load allows personnel to descend carrying heavy operational equipment

Additional Equipment A range of equipment is available to complement the descender including:

- Abseil Harnesses
- Abseil Ropes and Rope Bags
- Load Release Assemblies
- Karabiners

Technical specification		Part No.
Abseil Descender	Opening (Lockable) Gate, Single Stop Action	AML 16234
Abseil Descender	Fixed Gate, Double Stop Action	AML 16081
Abseil Descender	Fixed Gate, Double Stop Action. Incorporates attachment point for second harness / karabiner	AML 16682

The Abseil Descender and Harness Assemblies can be supplied in configurations to suit specific operational requirements and operating procedures. Please enquire regarding specific types or designs to meet special requirements or potential applications.
